

Overview of Chuo Line Rapid Service Series E233 Railcars

Concept

Implementing customer suggestions

- Reducing service disruptions
- Providing service-related information
- Improving usability for senior citizens and female passengers
- Cleaner air
- Wider seats
- Orange color is the Chuo Line "brand".
- Customers like stainless steel cars.

Postcard questionnaire

· 20,000 Chuo Line (rapid service) passengers (44% response rate)

Group interviews

· 93 passengers in Chuo Line areas

Internet survey

· Approximately 1,000 Chuo Line (rapid service) passengers

In-train survey

· Inside Chuo Line (rapid service) trains

Using the technology developed for the series E231

- Train information management equipment
- On-board amenities to increase passenger comfort (automatic air-conditioning and information provision)
- Automatic announcements
- Use of parts that require less maintenance

Cars that are not liable to fail (reducing service disruptions)

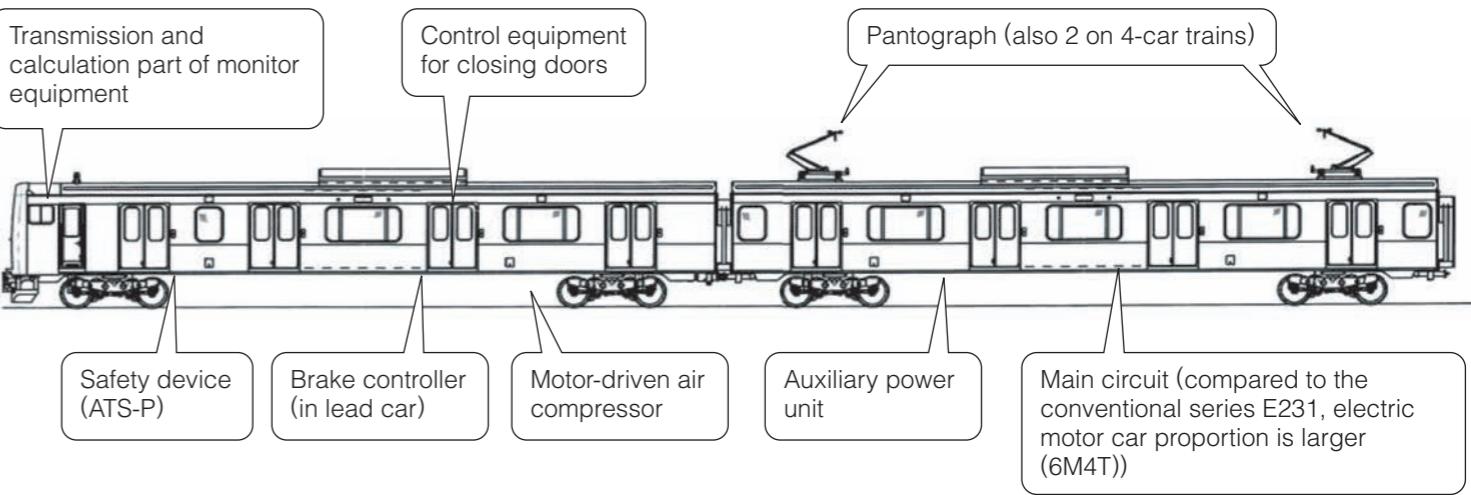

- Backups of main equipment fitted
 - Train can still carry on running even if one out of a pair fails.

Increasing the comfort and usability of cars, paying particular attention to senior citizens, females and the physically impaired

- Using Universal Design and improving accessibility for all
 - Height of luggage racks and hand straps each lowered by 50 mm around priority seating
 - Priority seating areas clearly marked
 - Braille used on doors
 - Floor of the train lowered to reduce the step between the train and the platform, from 80 mm to 30 mm.
- Women-only car created (designated as such only in the morning)
 - Height of luggage racks and hand straps each lowered by 50 mm since women are shorter than men.
- Air conditioning and wider seats for extra comfort
 - Air purifiers installed
 - Seats widened from 430 mm to 460 mm

Suggestions implemented

Backups for main equipment

External appearance

Comparison of new and old models

Series	E233	210
Number of cars	10 or 6+4 (6M4T)	10 or 6+4 (6M4T)
Body	stainless steel	steel
Maximum speed (car performance)	120 km/h	100 km/h
Control method	VVF inverter control AC induction motor	chopper control DC motor

Improved information displays and technical performance of cars

- Wide range of information for passengers
 - Inside the train: LCD displays to provide passengers with service-related information and news
 - On the outside of the train: full-color train destination displays (also for various different types of train)
- Reduced travel times from faster acceleration and deceleration
- Stainless steel wider-bodied cars to ease congestion
 - Bright and refreshing orange line on the body of the train

Enhanced resilience of train body
