

Many ESIO Employees are playing active roles worldwide

A lot of members of ESIO work actively in some overseas projects.
We are also involved in technical training for overseas railway operators.

Where ESIO have been abroad for business

Main purpose

- Support for Indian High Speed Rail Project (Technical support)
- Jakarta MRT construction management / O&M management consulting
- Myanmar National Railways improvement construction management
- Overseas product technology research
- International standard development deliberations
- International exhibition visit

電気システムインテグレーションオフィス (SIO)

Events

Diverse work styles

We are working to improve the technical capabilities of the entire electrical department of the JR East Group.

Establishment of equipment standards

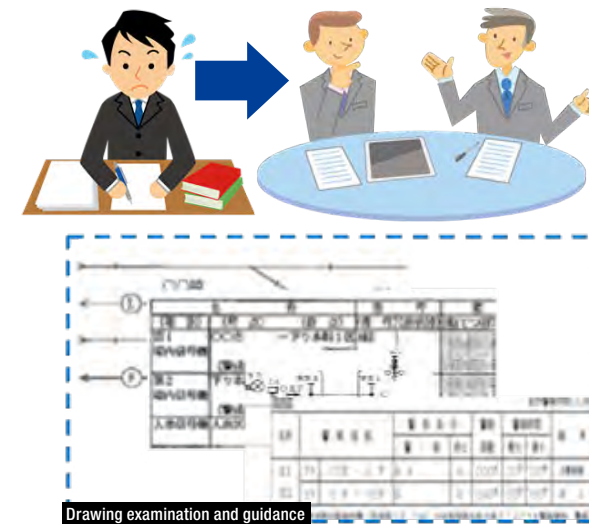

We establish specifications for the functions of equipment equipment functions and the performance of materials for safe railway operation.

Relations with Manufacturers

Technical examination

We confirm safety through examination of technical review documents and control diagrams for electrical equipment construction.

Technical guidance

We provide education and guidance when introducing new technology.
